

# Customer Snapshot: Large Enterprise Retail Company

---

## Challenges

- Is concerned about protecting the following types of information:
    - Healthcare information
    - Employee personally identifiable information (PII)
    - Customer personally identifiable information (PII)
  - Require data protection during the following circumstances:
    - Database security
    - Unstructured data security
- 

## Use Case

- Applies Vormetric Data Security to adhere to global compliance regimes in the following ways:
    - Help meet requirements 3, 7 and 10 of the Payment Card Industry Data Security Standard (PCI DSS) that call for the protection of cardholder information
    - Secure and controls access to ePHI – both unstructured medical imagery or structured database information from HIPAA/HITECH
    - Provide safe harbor and helps businesses avoid the cost and brand damage that comes with breach notification
    - Secure personal information
  - Uses Vormetric Data Security to achieve the following:
    - Lock down their data with encryption, strong key management, and security intelligence
    - Create strict access policies that ensure only authorized users can access sensitive information
    - Tightly monitor exposure, and implement transparent controls that do not impact how employees perform their jobs
    - Engage in ongoing monitoring and reporting
    - Establish an appropriate separation of duties between IT operations and IT security
  - Uses the following SIEM solutions to identify possible internal threats or APTs:
    - RSA Envision
- 

## Results

- Prevents the following insiders from accessing protected data with Vormetric:
    - System administrators
    - Domain administrators
    - Network administrators
  - Purchased Vormetric Data Security for the following reasons:
    - A data-centric strategy locks down the data, and removes risk from privileged users
  - Rates the likelihood of recommending Vormetric as 10 out of 10.
- 

## Testimonials

“The system is very reliable and scalable.”
